

INTRO

# RECEPTORBASED<sup>®</sup> ESSENTIALS

ReceptorBased<sup>®</sup> Essentials Intro is approved for 6 Neurology credit hours from the Carrick Institute for the ACNB & ACFN

RBE is the fastest way to learn and start implementing functional neurology in your clinical practice

Receive 6 Neurology Hours

Leverage your full scope of practice to better serve your patients with a modern ReceptorBased<sup>®</sup> paradigm of care

Carrick Institute Presents ReceptorBased<sup>®</sup> Essentials  
Kick off for Cape Canaveral, FL begins September 8-9, 2018  
Presented by: Dr. Matthew Antonucci & Dr. Adam Klotzek

## The Future of Clinical Neuroscience

ReceptorBased Essentials, or “RBE”, is the best entry-point into the practice of functional neurology. This program teaches a brain-based model for manual therapies, rehabilitation strategies, and performance optimization techniques which allows clinicians to better serve their current patient population as well as attract a new patient base. Based upon the feedback from our pilot programs, RBE serves as a “great introduction to functional neurology, that allows for immediate application”, a “great review of foundational concepts that allow you to refine your applications, even if you’ve been practicing functional Neurology for decades”, and “the glue that binds all functional neurology concepts together.” RBE is ideal for the provider that might be interested in experimenting with neurological applications, or the veteran functional neurologist with a desire to reaffirm foundational concepts.

## What this means to you:

- You will learn the clinical assessments and applications leveraged by the most successful clinicians in practice.
- You will be confident knowing that the concepts are effective and supported by current research in the literature.
- You will be able to immediately help your patients more effectively and efficiently with every module you attend.

## Who can attend?

RBE is open to all healthcare professions. Participants are solely responsible for ensuring that they remain within the scope practice defined by the legislation governing their license.

## Become the Provider that patients are searching for!

Patients are seeking clinicians who can truly understand the integrative nature of their conditions. You have a responsibility to make more than just an accurate diagnosis. You must have an understanding of all that contributes to your patient’s health struggles. Those with the proper training have a significant advantage in their ability to serve their patients at the highest levels. Enroll today to begin your journey to clinical excellence!

## Modules:

- RBE 1: Foundational Concepts in Clinical Neuroscience (C.N.S)
- RBE 2: Harnessing Receptor Systems in Therapy
- RBE 3: Autonomic Fuel, Flow & Function
- RBE 4: Reflex, Motor, and Cognitive Systems
- RBE 5: RBE in Action - Applying the 10 Principles of Plasticity

## Clinicians Enrolled in the Program will Receive:

- A flipped classroom for each module
- 15 credit hour courses
- A program workbook provided in class
- 3 months of unlimited access to Medline upon completion of the module
