Tony Robbins Mindset Training For Health and Wellness Professionals

Course Description

Discover your next level with Tony Robbins' Top National Trainer. Tony's elite group of National Trainers advise and consult with Fortune 500 companies, executives, managers and sales professionals in the areas of Peak Performance, leadership, organizational behavior, psychology of achievement and sales.

"Success is 80% psychology and 20% mechanics. My team of Peak Performance Strategists will show you how to turn your average producers into superstars."

- Tony Robbins

During this event you will improve your performance by integrating a three-step process for creating lasting change and clearly identifying what is holding you back from reaching your true potential by closing the gap between where you are and where you want to be.

Learning Objectives

- Discuss the DRIVING FORCES that impact every decision you make in your life
- Learn Tony's top tool for generating MOMENTUM so that you can get to where you want to go NOW
- Identify the chokeholds that are holding you back from producing the results you want in your business and personal life
- Learn how to create an UNSHAKEABLE MINDSET, so that no matter what is happening in the external world; you can always produce results
- What could you achieve at your PEAK?

"I loved Bill's energy. His enthusiasm is contagious! He trained my team for two hours on how to own their role as a key contributor to the overall success of the team while taking the time to help them become conscious of the limiting beliefs and habits that have been holding them back from getting the results they want in their personal lives. Two thumbs up!"- Dr. Charlie C.

Headaches: To Adjust or Not to Adjust...That is the Question

Course Description

Although 15% of Americans are currently under care of a chiropractor, most Americans know Chiropractic care for reducing pain with a non-pharmacological approach in 2 major areas: low back pain and headaches. Did you know that more people suffer from migraine headaches than diabetes + asthma combined in this country?

This class takes a hands-on approach for chiropractic attendees to widen their consideration of diagnosis when this very common symptom is presented. Attendees will be able to better avoid medical treatment errors when they are looking for red flags that this multifaceted approach considers.

Learning Objectives

- Differentiate a musculoskeletal headache and head pain caused from other areas of imbalance
- Recognize red flags alerting a chiropractor NOT to adjust, but instead: refer out, or order other imaging
- Introduce treatment options other than manipulation
- Garner further knowledge of current research supporting headaches

An Integrative Approach to Concussions, Played on the Field of Life

Course Description

Many are familiar with concussion diagnosis when sports are involved. But few think of concussions when witnessing falls on the park, in the airport, at the grocery store, or at home. As chiropractors ARE seeing AND TREATING concussed patients, do we know the ethical boundaries in place when witnessing, diagnosing, treating these injuries? Micky Collins published this article in 2016 that looked at concussion approaches from a multidisciplinary perspective in which he referenced his 6 subtypes of concussion: 1. Migraine (+ Autonomic and Sleep), 2. Affective (Mood), 3. Cognitive, 4. Cervical, 5. Oculomotor/Vision, 6. Vestibular Attendees will learn what a concussed individual goes through from the time they get injured until they are diagnosed. As well, all chiropractors will be reminded of how each discipline looks at and has the authority to treat concussion through their scope.

Learning Objectives

- Identify concussion in one of the six subtypes
- Differentiate your scope of practice when in the office, in public area, in Athletic Team of High School or College Programs
- Demonstrate one diagnostic test that can be used to quickly identify a concussed individual

Using Technology to Standardize Outcomes, Reduce Risk, and Increase Patient Satisfaction

Course Description

Chiropractic physicians are focused daily on increasing health and mobility in patients. 3rd party payors are focused daily on reducing risk of their insured, to have the highest outcomes for the patient population. This course is designed to increase patient safety, reduce risk with payors by correctly analyzing data collected from each individual office and create practice specific predictable risk. These instructors will demonstrate, with the use of technology, how this process will yield happier-healthier patients, higher patient volume, and higher reimbursements.

Learning Objectives

- Leveraging technology to care for high risk patients
- How to improve outcomes and reduce risk using technology to engage patients where they are...On their phones
- Reducing risk of pandemic 2.0 by implementation of technology

Vibration Specialist

Course Description

Discover why using vibration-based therapies are effective interventions for pain management, improving mobility and movement dynamics. A holistic (whole person) approach to movement and functional rehabilitation will be presented to aid in identifying key areas of compromise within the NMSK system. This course is an evidence-informed rehabilitation program that redefines our understanding of the effects of vibration in conjunction with traditional manual therapies.

Learning Objectives

- Discuss and experience the neuro-psycho-physiological effects of different frequencies of vibration
- Demonstrate functional use of vibration tools (compressive and decompressive) and understand their role and use for the applications of rehabilitation, edema management, injury recovery, posture, and dynamic movement management
- Demonstrate and discuss the use of vibration massager and vibrating cups with a psycho-social approach to care

TCM Accessory Techniques for Pain Part 1: Cupping / Ba Gua

Course Description

For many chiropractic physicians, we did not have a lot of time for hands-on practice for TCM accessory techniques of healing. In these 2 combined sessions, we will focus on the uses of cupping (ba gua), moxibustion and gua sha – how, when and why to chose these techniques and how to apply them safely for your patients.

Learning Objectives

- TCM Accessory Techniques for Pain Part 1: Cupping / Ba Gua
- Explain the safety and parameter for successful application of cupping or myofascial decompression in a clinical setting
- Review necessities for charting, treatment plans and coding for cupping / myofascial decompression
- Practical application of cupping to be practiced in class for various conditions

Clinical CE**Evaluation and Management of the TMJ Made Easy****Course Description**

This educational program will give you clinically relevant and evidence-based information related specifically to temporomandibular joint dysfunction (TMD) and orofacial pain diagnosis and management. The speaker will talk you through the steps in the physical examination process, which includes inspection, palpation, and auscultation of head and neck structures. Special explanation of exam processes and testing will be given to diagnosis common TMJ dysfunction such as synovitis, capsulitis, and myofascial pain syndromes. A special focus on treating the muscles of mastication, intraoral and extraorally, will be addressed. Attendees will learn how chronic poor posture has been shown to be a perpetrator in TMD, and how rehabilitation exercises and techniques may correct for this. This unique multi-disciplinary approach to evaluation and care can help your patients.

Learning Objectives

- Know all of important neck and neck anatomy in its relation to the structures of the TMJ
- Identify sources of somatic, referral, and neuropathic pain to the TMJ
- Understand the importance of performing a full head and neck examination when dealing with a patient with TMJ pain and/or dysfunction
- Build an understanding in properly diagnosing and treatment planning of various scenarios that might cause TMJ pain and dysfunction

Adjustment of the Thoracic and Its Junctions: Cervico-Thoracic and Thoraco-Lumbar

Course Description

This seminar teaches a practical hands-on approach on how to maximize your adjustment effectiveness via a universal model "the Arc of Tension" based on a better-known phenomenon named "Tensegrity". Three books have been published on the subject by the author Dr. E. Dubarry and he has been on the seminar circuit in Europe and South America for the past 30 years. It is the most practical seminar in the states, as the whole theory has been laid out on paper for the participant to read prior or after the seminar.

Learning Objectives

- Learn and understand the pattern on how to self-improve your adjustment
- Learn how to treat patients that you never thought you would be able to address previously
- Learn how to adapt to treat much bigger and taller patient
- Understand the pattern on how to self-improve your adjustment

EAT, DRINK AND BE MOTIVIATED: Gut-Liver Axis: Role of Microbiome in Toxicity

Course Description

One of the foundational therapeutics in functional medicine is supporting detoxification for our patients. Addressing the microbiome and biofilms is fundamental for supporting detoxification, immune system function, healthy inflammatory response, and lasting therapeutic effects. Failure to address the microbiome can create an obstacle to successful detoxification. Dr. Kristen Klos-Maki, Biocidin's Assistant Director of Research, will discuss the role of the Gut-Liver Axis and various therapeutic options to enhance detoxification in your patients and improve overall health.

Women's Health Panel - Part 1

Course Description

Women in the US make approximately 80% of the health care decisions for their families, yet often go without health care coverage themselves. Simultaneously many chiropractors are uncomfortable adjusting female concerns outside of headaches, low back or extremity pain. With females having such a large influence on healthcare choices for their families, we need to make sure chiropractors are comfortable in discussing, diagnosing, and adjusting issues related to only females. This lecture is designed to provide new and innovative techniques to handle thoracic pain in females, pelvic constipation, PMS, and pelvic disorder. Having top-of-mind access to different ways of treatments will help avoid risk and provide confidence in the best way to naturally heal. During our 2 hours together, we will break up into 3 groups and provide hands-on demonstration and training.

Stress and Detoxification

Course Description

To increase the doctors' knowledge base on the positive promotion of lifestyle to patients while addressing nutritional deficiencies related to stress and detoxification. Clinical options available to provide support for the improvement of the detoxification process, stress response on the body, and patient management.

Learning Objectives

- To present the cause/reactions of stress on the human body and the importance of nutritional support needed while managing patients
- To present the problem of nutritional deficiencies involved in stress and detoxification in our current environment
- To make information accessible concerning utilization of whole food supplementation, proper lifestyle for wellness and dietary choices to promote stress reduction and a healthy detoxification process
- The use of nutritional supplementation to restore, repair and renew the human systemic system by incorporation of patient education programs to support patient's during a detoxification program and the effects of stress on the physiology of the human body. Additionally, provide testing protocols for pre and post supplementation

The Brain Lab for the Modern Chiropractor- Dysautonomia, Long Covid Recovery & Performance

Course Description

Dysautonomia or autonomic dysfunction is a condition in which the autonomic nervous system (ANS) does not work properly. This may affect the functioning of the heart, bladder, intestines, sweat glands, pupils, and blood vessels. The diagnosis is achieved through functional testing of the ANS, focusing on the affected organ system. Investigations may be performed to identify underlying disease processes that may have led to the development of symptoms or autonomic neuropathy.

As innovative physicians, Chiropractors continue to integrate approaches into their delivery which allow and enhance the body and brain's ability to heal, recover, and perform. As we consider the brain-based view of our chiropractic healthcare model, we look at low-tech and high-tech applications that can upgrade a physician's outcomes and quantify the biomarkers pre/post treatments.

"A recent study finds that 67% of individuals with Long COVID are developing dysautonomia. That's an estimated 38 million Americans with Long COVID dysautonomia, and millions more around the world," says Lauren Stiles, President of Dysautonomia International and Research Assistant Professor of Neurology at Stony Brook University."

Learning Objectives

- Use interactive approaches to engage the attendees and provides evidence based examination methods that can be immediately implemented to improve outcomes with patients
- Understand neurotechnology and its application in the contemporary Chiropractic practice that deals with the increasing presentation of dysautonomia
- Experience technology which improve patient compliance and adherence to treatment plans

Clinical CE**Fascial Remedies & Biohacks: The Latest Examination & Treatment Recommendations****Course Description**

In this lecture/workshop participants will learn how Dr. Jeffrey Tucker has evolved his practice of treating fascial dysfunction, while using modern technology modalities (shockwave, laser, TECAR, LymphaTouch, PEMF, etc.), biohacking, nutrients, soft tissue therapy, manipulation, and of course exercise to impact healing, body composition, and performance.

You will get the inside look at an evidence-based approach + experience + patient preference on recommendations for diet, biohacking, supplements, and exercise that helps patients achieve their goals for decreased pain, stiffness, health optimization and longevity. Dr. Tucker will present his functional physical examination, movements for improving posture and fascial flexibility, and the current modalities he is using. All this in a workshop fashion.

Learning Objectives

- Learn how I integrate posture and movement to enhance patients pain relief, movement abilities, specific skills, overall health, well-being and longevity
- Help you figure out "What home therapies and tissues should I recommend
- Touch on aspects that can help doctors change fascia with recommendations for diet, exercise, regulate glucose, movement ease, sleep, speed, energy levels, activity levels, cardio fitness, lifting weights and reps, brain health, digestive health, hormone health, stress, inflammation, and longevity

Clinical CE**Methylation from Gut to Brain****Course Description**

This presentation is designed to introduce the concept of gut dysbiosis and microbial metabolism and how it impacts the brain and methylation related pathways. The topics of yeast and bacterial infection will be covered with an emphasis placed on how these imbalances produce epigenetic changes to important genetic pathways such as COMT, MAO, ALDH, MTHFR and more.

Learning Objectives

- Explore the connections between gut health, genetic expression, and optimum brain health
- Cover the recent research that explains how hidden gut infections influence genetic expression which then changes how the brain functions
- Investigate how common single nucleotide polymorphisms (SNPs) in the methylation-related pathways of the body are altered by hidden gut problems

6 Easy Steps To Take Your Health and Wellness Expertise Online Without Risk

Course Description

If the past two years have taught us anything, it's that a brick-and-mortar practices are subject to external forces beyond our control, whether it's a government mandated shutdown or simply fears that your patients may have about exposure. Not to mention the fact that insurance companies have a chokehold on the level of care you are able to provide your patients. In this workshop you'll learn to segment a wellness section of your practice, implement technology that will boost patient engagement, all while keeping proper security practices in place. Take your knowledge, skill, talent and passion for health and wellness and allow it to better influence your patient healing online, even if you are technology challenged.

Learning Objectives

- Learn the foundational tools and strategies when setting up an online practice and cyber security measures to put in place
- Differentiate claims vs. facts- The importance of a rock solid Privacy Policy/ Terms and Conditions page
- HIPAA and Patient Protection
- Identify and CRUSH the limiting beliefs you have about entering the online space, even if you're technologically challenged

The Art and Science of “Health” - The Future of the Hemp Plant as Medicine

Course Description

Helping our patients with their pain, sleep and mental health issues continues to be one of the biggest opportunities for healthcare providers today. Our current healthcare system is struggling to address the very essence of what it means to be human and what it means to be ‘healthy’. The first known records of the cannabis plant being utilized for medicinal and healing purposes dates back to 4500 BC. The landscape of our understanding of cannabinoid science and its role in our overall health is changing every day. In this talk, a review of the research and therapeutic applications for cannabinoid medicine will be presented objectively in the areas of pain, sleep, and mental health. You will be challenged to think outside the box on your current beliefs about physical and mental health; and how patient preference, clinical evidence and scientific research all play a key role in patient centered care. This talk is a refreshing reminder that for thousands of years, how we cared for ourselves and each other was not ‘alternative medicine’; it was essential medicine.

Learning Objectives

- Define what it means to be “healthy” and discuss the current ways our healthcare system looks at a patient’s/client’s ‘health’
- Discuss common sense approaches to improving a personal health ecosystem by redefining ‘what is medicine’
- Discuss hemp plant medicine as a factor to improve our approach to physical, mental and sleep healthcare, reviewing recent cannabinoid research
- Review the history of cannabis and it’s cultural, industrial and medicinal uses throughout time

- Understand the endocannabinoid system (ECS) and it’s importance in regulating many biological systems
- Discuss our current understanding of how cannabinoid products are digested and metabolized and the advancements in cannabinoid science to improve their bioavailability

The Most Expensive Documentation Mistakes Chiropractors Make

Course Description

In this riveting presentation, Dr. Gwilliam, Clinical Director for PayDC EHR Software, certified coder and auditor, will teach you how to avoid documentation mistakes that cost you money, including cloning and creating lousy care plans. He will demystify the confusion around where auditors and reviewers find the rules that they apply when looking at your records. He will show you how to easily satisfy documentation requirements so that you can get back to taking care of patients. With a thorough understanding of what you need to do to remain compliant you will be able to rest well at night and minimize your documentation-related anxiety.

Learning Objectives

- Learn how to avoid documentation mistakes such as cloning and illegibility and poorly constructed care plans
- Identify the references used by authoritative figures when they evaluate your claims and medical records

Wilk V. AMA: How spies, Documentation, Secret Sources and Determination Saved Chiropractic

Course Description

Learn what you don't know about the struggle for parity, seen through the lens of chiropractic history and why you can't coast now. Anyone who graduated after 1992 doesn't know that we are where we are today because of what happened then. Look back to see how the chiropractic profession took on the AMA, changing the profession and access to chiropractic care. Quantum change is coming with the transition to value-based care, which will present challenges in the future to ensure inclusion and parity as healthcare continues to change. Chiropractors learning from the past will be better prepared for the challenges of the future.

Learning Objectives

- Contrast the public's access to chiropractic care prior to and following the Wilk v. AMA litigation
- Discuss the impact of the litigation on opportunities for chiropractors and chiropractic students
- Apply the lessons of the past on current and future challenges facing the chiropractic profession

Clinical Pearls of the Liver & Gallbladder: Drugs, Metabolism, Antioxidants, and Patient Cases

Course Description

In this stand-alone session, Dr. Wisniewski will review the clinically relevant basics of liver and gallbladder function and dysfunction. We will concentrate on common conditions such as gallstones, biliary sludge, and hepatic stagnation. We will also discuss drug and nutrient metabolism and how our treatments can have an impact on said metabolism. We will round out the sessions by discussing real world patient examples with testing and treatment strategies.

Learning Objectives

- Learn about liver and gallbladder function
- Expand on natural therapies and their role in clinical care
- Learn how to implement different testing and therapies

Decompressing Spinal Decompression

Course Description

This course will focus on non-surgical spinal decompression (NSSD). The first part will be on the history and evolution of NSSD by discussing the technologies that have been in the market beginning in 1991 through today. Secondly examining all the clinical research on NSSD that has been published in addition to research to come. Finally, discussing multiple ideas and strategies to bridging the gap between the medical community and chiropractic utilizing NSSD.

Learning Objectives

- Reviewing the history and evolution of non-surgical spinal decompression
- Discussing non-surgical spinal decompression research and published clinical studies
- Bridging the Gap Between Chiropractic and Medical Community utilizing non-surgical spinal decompression

Primitive Reflexes: The Common Denominator in ADHD, Autism, Dyslexia, Anxiety, and More...

Course Description

We are in an epidemic of brain imbalance. Twenty to twenty-five per cent of our children have brain neurodevelopmental issues. - 10 % classified as ADHD (3 to 1 boys), 2.5 % Autism Spectrum (4 to 1 boys), and 10 to 15% dyslexia. The common denominator is that they all have primitive reflexes which indicates a weakness or lack of maturation in the brain stem. This causes an asymmetrical development of the brain, one side growing faster than the other. The presence of primitive reflexes is associated with certain negative neurobehaviors. The integration of the primitive reflexes matures the vagus nerve which controls 75 % of the parasympathetic nervous system (rest and digest). This causes too much sympathetic (fight/flight). These individuals are anxious and have sleeping issues. These individuals grow up and are anxious, depressed, and have insomnia. Thirty per cent in US have diagnosis of anxiety. Nine per cent depression. Extreme hemispheric imbalances are in bipolar (4.4 %) and schizophrenic (1%) individuals. We will demonstrate how to test for primitive reflexes and how to integrate using most effective techniques including laser therapy.

Learning Objectives

- How to test for primitive reflexes
- How to integrate primitive reflexes
- How to quantitate severity of symptoms and improvements with specific questions

Documentation

Understanding Your Audience is Vital in Documenting an Initial Visit

Course Description

Documentation for an initial visit or new episode shouldn't take all day! But how do you know what is too much and what isn't enough? With increased regulations and policies, your documentation can take more time than the time spent with the patient. We all know that more patient visits equal increased revenue and feeling like you must write the next best-selling novel only keeps you from reaching your fullest potential. Knowing your audience will often guide you through the level of documentation needed. Many offices fail to understand that documentation plays one of the most critical roles in their practice finances. We hear it all the time, "I don't have a problem with my documentation; I am getting paid for everything I am doing." But we wonder if they have looked to make sure.

We'll identify which missing components can become critical issues for your practice, along with the steps you can take immediately to better communicate through documentation to provide better protection for your practice and your patients.

Learning Objectives

- Learn to identify payer requirements as part of your documentation standards
- Identify and apply concepts that differentiate types of initial visits- new patients and updated episodes
- Produce documentation of initial visits that comply with the Medicare requirements for chiropractors
- Summarize documentation requirements as they apply to the new initial Evaluation and Management guidelines set forth January 1, 2021
- Establish medical necessity for your care and know with surety that initial visit documentation is complete
- Explain and apply Medicare's PART process of examination to document the presence of a subluxation

Communicating Chiropractic: The Posture Longevity

Course Description

The science supporting chiropractic care has been growing by leaps and bounds. From the impact of posture on longevity to the improved function of the brain following the adjustment, the evidence supporting chiropractic is strong. With over two dozen references, this presentation is designed to help you communicate the benefits of chiropractic more clearly than ever before. Attendees will learn to measure, document, and communicate goals for care to both patients and third-party payors for care beyond pain relief. Increase your clinical certainty by learning how to create and deliver an evidence- based treatment protocol based upon the science of chiropractic.

Learning Objectives

- Learn to measure, document, and communicate goals for care to both patients and third-party payors for care beyond pain relief
- Increase your clinical certainty
- Learn how to create and deliver an evidence- based treatment protocol based upon the science of chiropractic

Documentation

Documentation, CPT Coding & Record Keeping for Personal Injury, Sports Injury & Rehab

Course Description

Proper documentation and proper CPT coding and are co-dependent in today's chiropractic practice. A thorough discussion of documentation of the doctor's encounter with the new patient and subsequent follow up visits including establishing medical necessity for all treatment recommended and performed along with the proper use of CPT coding as it pertains to the most common examination and treatment procedure codes in the modern chiropractic practice.

This discussion begins with end in mind by starting from the insurance reimbursement check and works backwards through a thorough dissection of the health insurance claim form, daily SOAP notes and the initial report. The entire discussion is centered on medical necessity and the doctors are shown how medical necessity is developed and where it comes into play from the initial visit to the printing of a claim form.

We continue with a discussion of various CPT codes used in the chiropractic practice. Compare and contrast therapeutic modalities with physical therapies. Examples are given throughout showing (1) how to choose the appropriate code and (2) how to document the use of that code in the patient's records.

Learning Objectives

- Understand how to establish medical necessity to support their treatment plans and to document appropriately to (a) avoid payment delays or denials
- Reduce the likelihood of compliance audits and fraud, and (3) to get reimbursed for their time and expertise

Spinal Injury Documentation Made Simple Through Accurate Injury Understanding

Course Description

Spinal injury documentation has been over complicated due to a reduced understanding of spinal injuries in the first place. The severity and the location of any spinal injury needs to be fully understood, as this alone drives the foundation of all spinal injury documentation itself. This class will drive the desire for better spinal injury understanding so that the diagnostics, treatment approaches, best practices, and care guidelines make sense as well! This of course will lead to better patient treatment outcomes, less insurance/attorney reimbursement issues and reduced stress. Proper documentation of the injury itself is the key!

Learning Objectives

- Provide an understanding of the three main spinal injuries that occur, and therefore allow doctors to know what to look for and how to document appropriately
- Provide an understanding of the simplest guideline compliant way to document the severity and location of these injuries, leading to better management for better outcomes
- Learn the appropriate timing of the imaging procedures that are used to image these injuries, all three can cause Emergency Medical Conditions or Injury Thresholds involved with a certain level of patient benefits
- Understanding how proper documentation makes depositions or court testimony easy, should that become a necessity

Advanced Lower Extremity Adjusting - Part 1

Course Description

This 4-hour hands-on presentation covers basic biomechanics, neurology, examination procedures, indicators, and adjusting protocols for the most common subluxation patterns of the feet that are found in the typical practice. The concept of "The Noisy Joint" will be covered in detail.

This course is a "hands-on" workshop designed after the principles of DELIBERATE PRACTICE. The doctor/student will quickly acquire adjusting skills for the most commonly encountered extremity conditions. Also covered in this course are simple stabilization and rehabilitative procedures for the lower extremity.

Learning Objectives

- Understand and demonstrate the seven adjustments for the foot pronation protocol to include navicular, cuboid, cuneiforms, metatarsal heads, talus, calcaneus, and fibular head
- Understand and demonstrate the wrist extension adjustment for the knee utilizing listings of 1) medial condyle, 2) lateral condyle, and 3) posterior tibia
- Understand and demonstrate the indicator and adjustment for the hip utilizing the wrist extension thrust
